
Environmental Policy Statement

It is in the Company's interest to have a planned approach towards prevention and reduction of waste and pollution leading to a long-term reduction of costs, as prevention and reduction are more desirable and economical than damage repair after the event. This will be included within our licensed asbestos activities ensuring that waste is segregated such that only hazardous waste goes into the hazardous waste stream and all other waste goes into the non-hazardous route where there may be an opportunity to reuse or recycle.

The Company will control its activities to avoid causing unnecessary and unacceptable risks or adverse effects on the environment in line with the requirements of the Environmental Protection Act 1990, Environment and the Environmental Act 1995 & 2021, as far as is reasonably practicable. The Company has a management system in place that is externally assessed and certified to ISO 14001 standards.

Responsibility for the environment is ranked equally with that for the health and safety of employees, general public and others.

Environmental awareness and individual responsibility will be promoted and developed by Meta Limited to ensure all employees at all levels are made aware of their responsibilities with full and effective consultation being encouraged.

The Company will continue to develop and improve standards by making use of available technology and developments, together with a waste recovery and recycling approach.

Plant, vehicles and equipment will be maintained and operated to provide the maximum environmental protection as far as practicable.

Local community interests will be taken into account and positive communication with the community entered into where appropriate.

Clients, employees, general public who may be affected will be made aware of any company activity which may affect the environment.

Natural habitats and wildlife will be respected and where appropriate within the control of the company, maintenance, restoration, or creation of habitats will be encouraged. Risk assessments are implemented within our health and safety risk assessments to manage and control any potential environmental impact.

The Company will make available to all interested parties, its environmental programme and its environmental control activities.
